

WANT TRANSMITTING ANTENNAS RIGHT OUTSIDE YOUR BEDROOM WINDOW?

Now is the Time to Speak Up to Protect Your Living Environment!

5G “Small Cell” Legislation Will FORCE Local Government to Allow Unlimited Cellular Antenna Installation on Utility Poles and Lamp Posts, Capping Rates Municipalities Can Charge Wireless Companies. Communities Are Being Stripped Of Their Rights To Make Decisions About This New Technology

Stop 5G!

Congress & State Legislators Should Protect Public Health NOT the Wireless Industry!

Facts You Should Know:

1. The new small cell 4G/5G networks are **NOT needed** and are **NOT safe!**
2. Scientists and doctors worldwide are calling for the [halt to the 5G rollout](#).
3. Exposure to microwave and millimeter wave radiation will be unavoidable because **small cell 4G/5G antennas will be right outside homes, businesses and schools.**
4. Claims of safety made by telecom companies are based on **FCC guidelines that date back over 30 years**—when cell phones were the size of a brick!
5. Real estate values **will significantly decline** near base stations and antennas.
6. An [FCC Order](#) takes away remaining local control in order to **FORCE installation of 5G.** Educate all public officials so they [join the opposition](#) and prevent harm to **our health and the environment, especially pollinators like bees,** for wireless industry profits.
7. Public hearings and public notice **are being eliminated.**
8. Citizens and organizations across the country and the world **oppose 5G.**
9. There’s a safer alternative. **Fiber optic cabling!** Faster, safer, more reliable & secure.
10. See www.ehtrust.org for **independent science/health effects** from wireless radiation.

**Call Your U.S.Congressional Representatives and Your State Legislators Today
Tell Them to Protect Health, Safety and the Environment and Say “NO To 5G”
Join the Fight! WisconsinSafeTech.com
Keep Cellular Antennas Away from Our Homes, Schools, Offices and Parks**

Questions and Answers About Wireless Radiation:

Q. What exactly is wireless radiation?

A. Wireless radiation, also known as “radio-frequency radiation” (“RFR”) or “microwave radiation” is part of the vast energy spectrum that contains radio waves at one end and x-rays on the other. This type of radiation is emitted from wireless devices such as cell phones, routers, tablets and laptops (when they are using WiFi to connect to the internet), as well as from high-powered cellular antennas.

Q. What evidence do we have of negative effects from exposure to wireless radiation?

A. For many years, scientists believed that the only possible result of exposure to wireless radiation was heat. In fact, the standard used by the government to set allowable limits of exposure is still based only on thermal effects. So when wireless companies say their equipment is completely safe and meets government standards, they are talking only about thermal effects. There are now thousands of independent, peer-reviewed scientific studies from around the world showing adverse **biological** effects from exposure to wireless radiation, even at levels considered “safe” by the U.S. government. These include neurological damage in lab animals exposed during pregnancy, DNA strand-breaks, impacts on fertility, increased risk of brain and parotid gland tumors, and interference with implanted medical devices. Other effects include headaches, chronic fatigue, sleep disorder, depression, anxiety, nose bleeds, nausea, dizziness, memory difficulties, attention difficulties, cardiovascular, cancers and more. Children are more at risk because of their thinner skulls and developing brains.

Q. Aren't we already exposed to lots of wireless radiation in our lives?

A. Yes, we are. But you should have the right to control the amount of radiation in your own personal space. You can turn off your cell phone, or choose fiber-optics to connect to the internet, but once wireless antennas are mounted near your home, you'll be involuntarily exposed all day, every day. Studies have shown that the impact of this type of radiation is cumulative, meaning that constant, long-term exposure increases your risk.

Q. What do the wireless companies NOT tell you about their antennas?

A. Wireless companies are reluctant to admit that their claims of “safety” are based on old science, or that the government standards set for exposure were established back in 1996. They usually won't admit that their equipment is not necessary right now, but will allow them to make more money by offering more services to more people in the future. This is not about bringing broadband to underserved communities, or improving communications for first responders. This is about making more money for wireless companies by facilitating the Internet of Things (IoT), driverless cars and streaming videos.

You can turn off your cell phone. You cannot turn off a cell tower.
