5G National Day of Action

www.5GCrisis.com

We are Wisconsin For Safe Technology. Today, citizens across the country are opposing 5G-enabled “small cell” antennas in close proximity to homes and apartments until long-term exposure to wireless radiation has been proven safe.

[There are thousands of independent scientific studies](#) documenting harm and the wireless industry has no evidence of safety. Our children are uniquely vulnerable.

There is a big difference between voluntary and involuntary exposure. You can choose whether or not to use wireless devices or whether to hold a cell phone to your head, it’s a matter of personal choice, but if these “small cell” antennas are put up everywhere we don’t have a choice. **You and your family will be exposed to wireless radiation in your home, all day, every day.**

FCC exposure guidelines are decades old and the FCC is ignoring the published, peer-reviewed science proving that wireless radiation causes biological harm such as cancer, DNA damage, reproductive, cognitive and neurological harm, microwave sickness, etc. Even the American Academy of Pediatrics asked the FCC to reassess exposure guidelines for children and nothing has been done.

5G is not a public service, not necessary for public safety and puts **public health at risk, especially our kids.**

There are **zero** studies assuring that 5G is safe.

Involuntary exposure to wireless radiation in our own homes also violates our right to peace and privacy.

The solution is fiber optic all the way to the premises: It’s faster, safer, more secure and reliable.

We are asking that wireless companies voluntarily **stop the further deployment of 5G enabled “small cell” antennas** until long-term exposure to wireless radiation is proven safe.
